

## 2008 SPRING AND DURUM WHEAT VARIETY RECOMMENDATION MOTIONS

(Motions 1-5 submitted by Dr. Luther Talbert, Plant Sciences and Plant Pathology Dept. MSU)

- 1) A motion to remove AgriPro Knudson from the spring wheat variety recommendation list, effective February 2008.**

Mr. Joe Smith of AgriPro has asked us to remove this variety from the recommendation list.

- 2) A motion to remove Fortuna and Scholar from the spring wheat variety recommendation list, effective February 2008.**

Fortuna was released in 1966 and has been a longtime variety primarily grown for resistance to the wheat stem sawfly and although there is almost 5% of the spring wheat acreage seeded to Fortuna we feel there are better varieties available to the producers. Our newer release, Choteau has more solid stems and shows as good as or better resistance to the sawfly than Fortuna with higher yields across locations. Scholar was released in 1998 and is recommended for dryland production in districts 4, 5 and 6. Currently, Scholar is being grown on about 1% of the acreage and there is no certified or registered seed being grown in Montana. Outlook, Choteau and Vida yield better than Scholar in those districts and we feel they would be better choices.

- 3) A motion to remove Ernest from the spring wheat variety recommendation list, effective, February 2009.**

Ernest is also an older variety released in 1995 by NDSU. Again we feel that Choteau would be a better option for producers in sawfly regions in districts 2, 4 and 6 where it is currently recommended. The reason we are delaying the effective date is that there were about 450 acres of registered or certified seed grown in 2007 and this will give those producers notice.

- 4) A motion to remove WestBred Express and WestBred 936 from the spring wheat recommendation list, effective February 2008.**

These varieties were released by WestBred, LLC in 1991 and 1992, respectively and are currently being grown on less than 1 % of acreage. They are recommended for irrigated production in districts 1,2,3,4, and 6. There is some acreage of certified and/or registered seed being produced by Townsend Seed and WestBred,LLC.

- 5) A motion to remove Ben, Maier and Monroe from the durum wheat variety recommendation list, effective February 2008.**

The durum acreage seeded to these varieties was 1% or less and there was no certified or registered seed produced in 2007. The other recommended durums, AC Avonlea, Alzada and Mountrail show better yields and have acceptable durum quality traits.

(Motions 6-7 submitted by Mr. Joe Anderson, AgriPro Wheat)

- 6) A motion to recommend Kelby hard red spring wheat for districts 1, 4 and 5 under dryland conditions and district 2 under irrigated conditions.**
- 7) A motion to recommend Kuntz hard red spring wheat for districts 2 and 3 under irrigation.**

(Motions 8-10 submitted by Mr. Craig Cook, WestBred, LLC, Inc.)

- 8) A motion that Volt be recommended as a hard red spring wheat for all irrigated districts in Montana.**
- 9) A motion that Jedd be recommended as a hard red spring wheat for all irrigated and non-sawfly infested dryland areas of districts 1-6 in Montana.**
- 10) A motion that ONeal be recommended as a hard red spring wheat for dryland in districts 3,4,5,6 in Montana.**
